

Notice: **Deviation of OATT Section 17**

Posted: **April 16, 2009**

On February 26, 2009, PGE Transmission and Reliability Services (PGET) confirmed three pre-confirmed transmission service requests for long-term point-point transmission service submitted on OASIS by PGE's merchant function. The requests contained all of the information required under Section 17.2 of PGE's OATT for a Completed Application except for a statement indicating that the customer will execute a service agreement upon receipt of notification that the Transmission Provider can provide the requested Transmission Service, although the requests were "preconfirmed", a status which implies that statement. The customer did not submit a deposit with the pre-confirmed request, since a deposit can not be made over OASIS. The customer has since executed service agreements and provided deposits for all three requests. PGE T&RS exercised its discretion under Section 17.1 to grant the requests for transmission service sooner than 60 days from when the application was made.
