Transmission Requests Business Practices

Transmission Requests

- 1) ALL requests for NON-FIRM transmission must be PRE-CONFIRMED.
- 2) Hourly requests may be refused for insufficient ATC based on system conditions. As system conditions fluctuate, the OASIS may show ATC greater than 0 but the request may be refused if fluctuating system conditions indicate ATC is actually less than posted.
- 3) If a Transmission Customer desires PTP service for a POR/POD combination not posted in one path but posted as a series of two posted paths, then two concatenated TSRs may be submitted with the price for the second associated TSR at \$0 with reference notes. For example, if a Transmission Customer wishes to request Rawhide (RAW) to Fort St.Vrain (STVRN), then submit one TSR for RAW (POR) to AU (POD) with a note in the Customer Comments section of the TSR regarding "Part 1 of 2" and submit another TSR for AU (POR) to STVRN (POD) with price at \$0 and a note in the Customer Comments section of the TSR regarding "Part 2 of 2 reference TSR # (first leg)." This transmission request may be tagged as RAW (POR) to STVRN (POD).
- 4) Transmission reservation billing will be based off the effective Tariff rates. Effective rates may differ from the rates listed on OASIS offering summary or what is listed within the TSRs. Platte River updates OASIS as soon as possible, typically prior to rate changes to minimize discrepancies. TSRs that span a Tariff rate change will be charged the effective rate at each time increment within the TSR. For example, if a Firm Monthly TSR is scheduled April 1 through August 1 and the Platte River rates change June 1, the first two months will be at the earlier rate, and the last two months will be at the newer rate.
