

## **NOTICE TO SRP TRANSMISSION CUSTOMERS SEPTEMBER 1, 2008 DUE DATE FOR DATA SUBMISSION**

September 1, 2008 is the due date for all SRP Transmission Customers to submit their 10-year projections of their loads, resources, and transmission requirements. These data will be incorporated by SRP's Transmission Planning Department into SRP's annual 10-year transmission plan.

Such data submissions by SRP Transmission Customers are required under the SRP Open Access Transmission Tariff, approved by SRP's Board of Directors March 3, 2008, Attachment K, Section II.A.3.c as follows:

### **II.A.3.c Transmission Customer's Responsibility for Providing Data**

- i. Use of Customer Data. SRP uses information provided by its transmission customers to, among other things, assess network load and resource projections, transmission needs, operating dates and retirements for generation resources in SRP's system, and to update regional models used to conduct planning studies.
- ii. Submission of Data by Network Transmission Customers. As required pursuant to SRP's Open Access Transmission Tariff (OATT), network transmission customers shall supply information on their ten year projected network load and network resources to SRP on an annual basis. This information must be submitted electronically by network transmission customers to SRP to [SRP.TransmissionPlanning@srpnet.com](mailto:SRP.TransmissionPlanning@srpnet.com) by September 1 each year.
- iii. Submission of Data by Other Transmission Customers. To maximize the effectiveness of the SRP planning process, it is essential that all other transmission customers provide their ten year needs in the form of relevant data for inclusion in the SRP transmission planning process. This information must be submitted electronically by transmission customers to SRP to [SRP.TransmissionPlanning@srpnet.com](mailto:SRP.TransmissionPlanning@srpnet.com) by September 1 each year in order to be included in the planning process for the transmission plan that SRP submits to the ACC the following January.
- iv. Types of Transmission Customer Data. To the maximum extent practical and consistent with protection of proprietary information, data submitted by network transmission customers and other transmission customers should include for the ten year planning horizon:
  - (a) Generators – planned additions or upgrades (including status and expected in-service dates), planned retirements and environmental restrictions.
  - (b) Demand response resources – existing and planned demand response resources and their impacts on demand and peak demand.

- (c) Network customers – forecast information for load and resource requirements over the planning horizon and identification of demand response reductions.
  - (d) Point-to-point transmission customers – projections of need for service over the planning horizon, including transmission capacity, duration, and receipt and delivery points.
- v. Notification of Material Changes to Transmission Customer Data. Each transmission customer is responsible for timely submittal of written notice to SRP of material changes in any of the information previously provided to SRP related to the transmission customer's load, resources, or other aspects of its facilities or operations which may, directly or indirectly, affect SRP's ability to provide service.

SRP Transmission Customers must submit the required data electronically to:

[SRP.TransmissionPlanning@srpnet.com](mailto:SRP.TransmissionPlanning@srpnet.com)

Any questions about this data submittal may also be submitted to this same e-mail address.
