Resumption of on-line testing at Châteauguay substation

Tests planned for June 20 and 21 at the interconnection MASS, in coordination with the New York Independent System Operator (NYISO) as part of the implementation of a new operating mode at Châteauguay substation, were not carried out.

These tests will instead be done on July 5 and 6, 2016, as follows:
- HQT-MASS path: 9 p.m. to 11 p.m. on July 5
- MASS-HQT path: 11 p.m. on July 5 to 7 a.m. on July 6

During that period, the outage schedule posted on OASIS will show that the path opposite the tests will be totally unavailable (TTC=0). The TTC posted for the path on which the tests will be performed will vary hourly based on need. Quantities will be displayed at least two days before the planned test days.

Other than the reduced transfer capability posted during the test period, there will be no other restrictions on normal commercial service.
